

NUKKAD — V1 REFINED SCOPE

What we build now • What we defer • Why

1. V1 Product Principle

Nukkad V1 should not try to become a complete LinkedIn, job portal, LMS, investment platform and community app at once. The V1 should prove one core loop:

Discover → Connect → Build → Opportunity

The product should help a user find something worth building, find people to build with, discover startups and take a meaningful opportunity.

2. The Six Core Engines

Engine	Core question
■ People	Who are you and who do you want to meet?
■ Ideas	What can we build?
■ Startups	What is already being built?
■ Opportunities	Where can I participate?
■ Chapters	Where is my community?
■ Capital	Who can fund it?

3. Core V1 Features — Build

■ User Profiles

- Simple onboarding with goals, skills and 'Looking For'.
- Profile: role, college/company, experience, skills, projects, startups and availability.

■ Ideas

- Post an idea in a simple format: problem, solution, target customer, stage and what help is needed.
- Discover, search and filter ideas.
- Primary CTA: 'I WANT TO BUILD THIS'.
- Users select how they can contribute: AI/ML, tech, product, design, marketing, sales, operations or domain expertise.
- Idea → interested people → team → 'Turn Into Startup'.

■ Startups

- Living startup profile: problem, solution, team, stage, traction, updates and what the startup needs.
- Jobs, internships and founding roles.
- Follow startup, connect with founders and 'Join Startup'.

■ Opportunities

- Full-time jobs, internships, founding roles, co-founder opportunities, startup projects, AI/ML roles and campus opportunities.
- Support 'I'm Interested' / 'Join the Team' for early-stage roles.

■ People / Network

- Search by skill, college, location, role, experience and Looking For.

- Connect, follow and basic 1:1 messaging.

■ Chapters

- Chapter directory and profile.
- Members, ideas, startups, opportunities, events and resources.
- Chapter leadership and 'Become Chapter President' application.

■ Investor Marketplace

- Investor profiles: type, sectors, stage, geography, ticket preference, portfolio and thesis.
- Startups raising: stage, amount, sector, traction, team and relevant documents.
- Basic Startup ↔ Investor matching.
- Founder: Request Introduction. Investor: Express Interest.
- No actual investment execution or money movement in V1.

■ Personalized Home

- Show opportunities, ideas, startups, people and chapter activity relevant to the user.
- The home screen should answer: 'What can I do on Nukkad today?'

4. Supporting V1 Features — Keep Lightweight

- ■ Feed: basic posts, startup updates, ideas, opportunities and events; no advanced feed algorithm.
- ■ Events: listing, registration and attendees.
- ■ Notifications: connections, idea interest, opportunities, events and replies.
- ■ Messaging: basic 1:1 messaging only.
- ■ Resources: simple community upload/search for useful documents, links, videos, notes, templates and other resources.
- ■ Matching: rules-based initially using skills, goals, stage, sector, college/location and opportunity requirements.
- ■ Chapter President: application, approval, title and basic chapter dashboard.

5. What Is Deferred — Not Eliminated

Deferred feature	Reason / V1 approach
■ Nukkad Academy	Full course/LMS platform; start with simple programs/events later.
■ Advanced AI Matching	Start with rules; introduce AI recommendations after usage data exists.
■ Investment Execution	Keep discovery, matching and introductions; actual regulated execution later.
■ Video Calling	Not needed for V1.
■ Group / Chapter / Team Chat	Keep 1:1 messaging first.
■ Advanced Chapter Analytics	Basic activity metrics only.
■ Full College Management System	Chapter foundation only.
■ Complex Payments	Only add payments where a real V1 workflow requires them.
■ Advanced Feed Ranking	Simple chronological/relevance logic first.
■■■ Complex Mentorship Platform	Basic mentor discovery can come later.

6. What We Are NOT Eliminating

The following remain part of the Nukkad vision and should be architecturally possible, but we are deliberately reducing their V1 engineering complexity:

- Events — keep simple, because offline events are important for adoption.
- Resources — keep simple, because Chapters need a shared knowledge layer.
- Feed — keep basic, because users need a reason to return.
- Messaging — keep basic, because connections need continuity.
- Investor Marketplace — keep in V1 because capital is an important side of the ecosystem.

7. The V1 'Aha' Moment

A user joins Nukkad, selects 'AI/ML' and 'Looking for a founding opportunity', completes their profile, and immediately sees relevant startups, ideas and people.

- User opens an idea.
- Clicks 'I WANT TO BUILD THIS'.
- Selects AI/ML as contribution.
- Idea creator/team receives the interest.
- User connects/messages and can become part of the team.

This is the experience that should make Nukkad feel different from Day 1.

8. V1 Success Metrics

- Profile completion
- Connections created
- Ideas posted
- People expressing interest in ideas
- Teams formed around ideas
- Startup joins / founding applications
- Jobs and opportunities applied to
- Events registered/attended
- Startup-investor introductions
- Weekly active users

North Star: meaningful connections and outcomes created — not downloads.

9. Tech Team Direction

Do not build Nukkad as disconnected screens. Build the underlying network graph first:

User ↔ Idea ↔ Startup ↔ Opportunity ↔ Chapter ↔ Investor

Every new feature should plug into these relationships. The V1 architecture should make it possible to add Academy, advanced AI matching, mentorship, richer communities and investment infrastructure later without rebuilding the core.
